

CERTIFICATE OF ANALYSIS

FHRLICHIA CANIS

IFA Substrate Slide

| Catalog No.: | SLD-IFA-EC |
|----------------------------|-----------------|
| Size: | 12 Well |
| Well Capacity: | 10 μΙ |
| Lot: | P120913-001 |
| Expiration: | 11 October 2016 |
| Agent: | Ehrlichia canis |
| Strain: | CDC/V241 |
| Cell Culture Substrate: | DH82 cells |

Description:

Slides contain fixed *E. canis* in DH82 cells (licensed under U.S. Patent No. 5,192,679). Cells are unstained and slides are sealed in moisture-free foil pouches.

Quality Control Method:

IFA using VMRD, Inc. *Ehrlichia canis* Positive Control (catalog no. PC-IFA-EC), *Ehrlichia canis* Negative Control (catalog no. NC-IFA-EC), and Anti-Canine IgG FITC Conjugate (catalog no. CJ-F-CANG-10ML).

Specific Reaction: 3-4+ fluorescence with the positive control and negative with the negative control, no

background. There are 20-60 infected cells per high powered field.

Other Comments: NA

Pattern Of Fluorescence:

Brightly fluorescent cytoplasmic inclusion bodies (morulae), clustered elementary bodies (initial bodies), and free elementary bodies.

Interpretation of Results:

Titers of 1/50 (IgG) and greater are considered positive. Positive control sera, with stated endpoints, are available on request (catalog no. PC-IFA-EC).

Intended Use:

Generally used for Indirect FA to detect antibody to *E. canis* but may also be used as a positive and negative control substrate slide for Direct FA conjugates when applicable.

Storage:

Store sealed in foil pouch at -20°C. Avoid self-defrosting freezers.

References: NA

Recommended Staining Procedure for Indirect FA:

- 1. Warm slide to room temperature before removing from foil pouch.
- 2. Place diluted serum on the designated wells. Dilute serum in serum diluting buffer, pH 7.2 (catalog no. FASDB-100ML) however if high background due to anti-bovine IgG activity is present it may be advisable to use SSDB-100ML.
- 3. Incubate slide in humid chamber at 37°C for 30 minutes.
- 4. Using a wash bottle, gently rinse slide briefly in FA rinse buffer, pH 9.0 (catalog no. FARB-4X) and then soak for 10 minutes in FA rinse buffer, pH 9.0.
- 5. Drain slide and dry around wells by pressing blotter (included in pouch) to front surface. Place labeled anti-IgG or IgM on the wells.
- 6. Incubate as in step 3.
- 7. Rinse as in step 4.
- 8. Drain slide and dry back and edges with a paper towel. Do not allow stained surface to dry. Do not rinse with water.
- 9. Mount with mounting fluid [glycerol/FA rinse buffer, pH 9.0, (50/50)] (catalog no. FAMF-10ML) and view with good quality fluorescence microscope at 100X-250X. Confirmation may be made at 400X.

Recommended Staining Procedure for Direct FA:

- 1. Warm slide to room temperature before removing from foil pouch.
- 2. Place direct FA conjugate on the designated wells.
- 3. Incubate slide in humid chamber at 37°C for 30 minutes.
- 4. Using a wash bottle, gently rinse slide briefly in FA rinse buffer, pH 9.0 (catalog no. FARB-4X) and then soak for 10 minutes in FA rinse buffer, pH 9.0.
- 5. Drain slide and dry back and edges with a paper towel. Do not allow stained surface to dry. Do not rinse with water.
- 6. Mount with mounting fluid [glycerol/FA rinse buffer, pH 9.0, (50/50)] (catalog no. FAMF-10ML) and view with good quality fluorescence microscope at 100X-250X. Confirmation may be at 400X.

Serum Diluting Buffer (pH 7.2):*

| - | Na ₂ HPO ₄ | 1.19 gm |
|---|----------------------------------|-----------------|
| - | NaH ₂ PO ₄ | 0.22 gm |
| - | NaCl | 8.55 gm |
| - | BSA | 10.0 gm |
| - | DI/dH ₂ O | Q.S. to 1 liter |

^{*}This recipe makes 1 liter. If you need less, adjust recipe accordingly. Store at 2-7 C. Add 0.09% NaN₃ if diluted serum is not going to be used within one week.

4X FA Rinse Buffer (pH 9.0):

| - | Na ₂ CO ₃ | 11.4 gm |
|---|---------------------------------|--------------|
| - | NaHCO ₃ | 33.6 gm |
| - | NaCl | 8.5 gm |
| _ | DI/4H°O | OS to 1 lite |

Final pH should be 9.0-9.5. This is a 4X concentrate and should be diluted 1/4 with DI/distilled water for use as a working buffer. Keep in a tightly stoppered container at room temperature. MOUNTING FLUID is made by mixing glycerol and FA rinse buffer, pH 9.0, in equal proportions.
